PROMVIS Free - End User License Agreement

Version 1.2 | 27 October 2026

1. Agreement and access

This agreement is between CoderPush Technology Company Limited, Viet Nam ("CoderPush"), and the customer accepting it for PROMVIS Free. For an AWS Marketplace subscription, this version takes effect only when the customer accepts it with the applicable offer. For Direct Free access, this version applies only when separately presented and accepted through the applicable PROMVIS account process. An AWS Marketplace acceptance does not by itself bind a direct user who has not accepted the agreement. It does not retroactively replace an existing agreement. CoderPush grants a limited, non-exclusive, non-transferable right to use the hosted service for lawful personal research and learning while the customer maintains an eligible PROMVIS Free account, subject to this agreement. An active AWS Marketplace subscription is not required for Direct Free access. Protect your account and do not share credentials, bypass limits, access other users' data or resell the service or underlying datasets. CoderPush and its licensors retain their rights in the service and supplied materials. You retain your rights in submitted content and permit its processing only as needed to provide, secure and support the service.

2. Free service

PROMVIS provides available VN30 financial information, end-of-day data and AI-assisted research. Direct Free access requires sign-in; email verification is optional for direct access and required for AWS Marketplace ownership linking. The allowance is 1,000 requests per personal workspace per UTC calendar month, shared across direct and Marketplace access, with no rollover. Linking, cancelling or subscribing again through AWS Marketplace does not create a new workspace, reset usage or add an allowance. An account link and the current Marketplace subscription status are separate records; a linked account does not by itself establish an active subscription. There are no PROMVIS subscription fees, overage charges or automatic paid conversion; consequently there are no PROMVIS software charges to refund. Completed answers count once, including clarifications and unavailable-information answers; technical failures without a completed answer do not count. Stopping an individual answer request after AI processing starts may count once. Cancelling the AWS Marketplace subscription is separate from stopping an answer request and does not itself consume a request. New requests pause at the limit; available history and deletion controls remain accessible to authorized users.

3. AI and investment decisions

PROMVIS is a research tool, not a broker or investment adviser, and does not execute trades or provide personalized investment advice. AI output may be inaccurate, incomplete or outdated and does not guarantee investment results. Independently check sources and suitability before acting; you are responsible for your investment decisions. The service is provided as available, without a promise of uninterrupted operation or error-free output, to the extent permitted by law. To that extent, neither party is liable for indirect or consequential losses, including lost profits, arising from this agreement. Nothing excludes liability for fraud, willful misconduct, gross negligence or any liability or consumer right that applicable law does not permit a party to exclude. These limitations do not remove CoderPush's applicable privacy or security obligations.

4. Support, suspension and termination

Product support: aws@coderpush.com, Monday-Friday, 09:00-18:00 Asia/Ho_Chi_Minh, excluding Vietnam public holidays. The reply target is two business days, not a guaranteed resolution time or availability SLA. CoderPush may suspend access where reasonably necessary to address misuse, a security threat or legal requirements, and will explain the reason when lawful and practicable. You may stop using the service, cancel the Marketplace subscription through AWS or request account closure. Cancelling the Marketplace subscription ends that subscription but does not close your PROMVIS account or, by itself, revoke Direct Free access. Your existing workspace, conversation history under the normal retention policy, usage and remaining monthly allowance are retained for continued Direct Free use, subject to this agreement. Suspension for misuse, security or legal reasons and account closure remain separate from Marketplace cancellation. Material service changes or discontinuation will be notified through the service or account contact with reasonable advance notice where practicable. Contact the privacy address below to request access to or deletion of remaining personal data.

5. Applicable terms

For Marketplace subscriptions, the applicable offer, this EULA and the following Privacy Notice describe the Free service; mandatory AWS terms continue to apply separately. For Direct Free use, the separately accepted PROMVIS terms govern; an AWS Marketplace offer is not automatically incorporated. The proposed new public AWS Marketplace offer is limited to eligible buyers in Viet Nam, as determined by AWS Marketplace country-availability rules. This offer restriction is not a representation that PROMVIS applies an IP-based country block to Direct Free users and does not retroactively terminate existing agreements. This is CoderPush's custom EULA, not the Standard Contract for AWS Marketplace, and does not incorporate SCMP's insurance obligations. Changes to this EULA apply prospectively through an applicable acceptance or renewal process, not merely by replacing the document. Vietnamese law governs, subject to mandatory protections applicable to the customer. Parties will first try to resolve disputes in good faith; unresolved disputes may be brought before competent courts in Viet Nam, subject to mandatory jurisdiction rules.

PROMVIS Privacy Notice

Version 1.2 | 27 October 2026

Operator and contact

CoderPush Technology Company Limited operates PROMVIS. Contact address: XYZ Building, 236/43/2 Dien Bien Phu Street, Gia Dinh Ward, Ho Chi Minh City, Vietnam. Privacy, account closure and security requests: aws@coderpush.com. Product support: aws@coderpush.com.

Information and purposes

We process account and verification information to provide sign-in and protect your workspace; questions, conversation history, answers and references to provide research; and usage records to administer the allowance. Marketplace setup uses buyer account, product, license and agreement information to validate and link your subscription and report its observed status. Marketplace subscription status is separate from eligibility for Direct Free access; cancelling a subscription is not an account-deletion request. Support correspondence and diagnostic records help us respond to requests, troubleshoot failures and protect the service. Diagnostics can contain questions, answers, intermediate model or tool information and request or session identifiers. Do not submit passwords, access tokens or unnecessary sensitive personal information.

Providers and locations

We use AWS hosting, storage and Cognito authentication configured in Singapore, and Amazon Bedrock model endpoints configured in Tokyo, Japan. We send diagnostic traces, including conversation content, to Langfuse Cloud in the United States. Information may therefore be processed outside your country. Providers process information for service delivery and operations; applicable legal disclosure requirements may also apply. We use authentication and access controls to protect information; no system can guarantee absolute security.

Cookies, retention and your requests

Essential cookies support sign-in, sessions and Marketplace setup; blocking them may prevent these features from working. Conversation storage uses a 30-day lifecycle based on stored updates, so continuing a conversation can keep earlier messages longer. Deleting a conversation removes it from available history, but does not immediately erase retained versions, traces or backups. Account, usage, Marketplace, diagnostic and support records have separate retention needs for service operation, security and applicable legal obligations; the conversation lifecycle does not set their deletion dates. We assess access, correction, account-closure and deletion requests through the privacy contact, verify identity where needed and explain any retention exceptions. Rights and response requirements depend on applicable law. We do not promise permanent deletion of all records within 30 days. Material changes to this notice will be communicated through the service or account contact where required.
