

License Agreement: Intuz's (Powered by Intuz) applications are based on the GNU General public licenses. The respective application installed will be listed with their original license agreement. The GNU Licenses for all our offerings apply to the open source products built by Intuz and available in Amazon Marketplace. In case, any of the Intuz's products lose its GNU License and is changed to a paid application, it will be the individual's responsibility to apply it properly. The stacks, thoroughly explained, are installed to help the customers reduce the time of installation, setup and configuration. Intuz is not responsible for any defect in the product and will not be liable to any sort of reimbursement the cost paid to Amazon to run the AMIs on top of which our built application stack is running. All the necessary testing has been done by us before making the application live on AWS Marketplace. All the software, trademarks, logo, license, and other intellectual properties used in this AMI are the exclusive property of respective owners. This AMI contains OpenSource (Community edition) software, so you cannot use enterprise version license in it. We will not be responsible if any damage has been done to your data while upgrading the AMI or relaunching it. Customer will be solely responsible if anything happens to their data in any case.
